

PLM Consultant Job Description

Job Brief:

We're looking for a Product Lifecycle Management (PLM) Consultant who is responsible for assisting organizations in implementing and optimizing PLM systems to streamline product development processes and enhance efficiency.

Responsibilities:

- **PLM System Implementation:** Collaborating with clients to understand their business requirements and configuring PLM software to meet those needs.
- **Customization and Integration:** Developing custom solutions and integrating PLM systems with other enterprise applications such as ERP (Enterprise Resource Planning) and CAD (Computer-Aided Design) software.
- **Business Process Analysis:** Analyzing existing workflows and processes to identify areas for improvement and designing optimized processes leveraging PLM capabilities.
- **User Training and Support:** Providing training to end-users on PLM system functionality and offering ongoing support to address issues and maximize system utilization.
- **Quality Assurance and Testing:** Conducting testing and quality assurance activities to ensure the PLM system meets performance, reliability, and security requirements.
- **Documentation and Reporting:** Creating documentation, reports, and user guides related to PLM system configuration, processes, and best practices.

- **Stay Current with PLM Trends:** Keeping abreast of emerging technologies, industry trends, and best practices in PLM to offer innovative solutions and insights to clients.

Qualification:

- Bachelor's Degree in computer science, engineering, or information systems or equivalent experience.
- Experience with Microsoft Dynamics and Teams systems and software.
- Experience in a consulting role.
- Experience with SQL, SQL Server, CPQ, XML, C, and Java.

Salary: As per Industry Standards

Experience : 4-6 Years

Location : PAN India
